TSafe® Personal Data Protection

Find & protect personal data — files, databases & endpoints. 100% offline.

Discover **Aadhaar, PAN, SSN, NINO, cards, health & contact data** hidden across your computers, file servers and databases — and prove you can protect it. **Fully offline. Not a single byte leaves your premises.**

SINCE 2007

TSAFE — India's leading dongle manufacturer & supplier. For nearly two decades we've secured software and digital work with BIS-certified dongles: **software licensing**, **Fonts DRM**, **VFX & video projects** and **Office & PDF files**. Now we bring a complete solution to discover and protect **personal data** on your systems, as required under DPDP, GDPR, CCPA & HIPAA.

The Law Is Here
DPDP, GDPR, CCPA & HIPAA all require you to find and protect personal data.

The Risk Is Real
Penalties up to **₹250 crore** per instance for mishandling personal data.

Step One Is Discovery
You cannot protect what you cannot see. Start by finding where personal data lives.

WHAT IT DOES

100% Offline — No AI, No Cloud
Runs on your machine. Nothing leaves the building. A trustworthy, auditable alternative to cloud AI tools.

Trainable to Your Data
Add your own terms & patterns, and **Exact Data Match** your own records — only salted hashes are stored. It learns from your confirmations; undo or reset to defaults anytime.

Files & Databases
Documents, PDFs, Office, archives — and MS SQL Server, MySQL, PostgreSQL, Oracle.

Audit-Ready Evidence
Masked reports (HTML/CSV/JSON) & a tamper-proof log your DPO can hand an auditor.

Validated IDs + Names & Addresses
Checksum-validated Aadhaar, PAN, GSTIN, SSN, NINO, IBAN, cards & health — plus on-device detection of **names and full postal addresses** that identify a person or family.

You Choose the Depth
Quick, Standard, Deep or Maximum scanning — and every finding is **explainable**, showing the rule and the evidence behind it.

OCR for Scanned IDs
Reads Aadhaar/PAN card images and scanned forms, not just typed text.

Act on Findings
Quarantine, encrypt, mask/redact or securely delete risky data — one click.

Free AI tools send your data to the cloud. For a bank, hospital or government office that is itself a breach. TSafe® does the same discovery **entirely on your premises** — the one thing free tools can never offer.

WHO IT'S FOR

Banks & BFSI · Government & PSUs · Healthcare · CAs & auditors · GCCs / IT · SMEs · Law firms

Works on **Windows, macOS & Linux**. Licensed by a single **TSafe®** USB dongle — plug it into any machine and scan. Perfect for auditors scanning multiple clients. **Need 25+ Machines At Once?** See the Cloud Edition on Page 2.

MRP ~~₹29,499~~

INTRODUCTORY PRICE — FIRST 500 CUSTOMERS

₹4,999 incl. GST

✓ **Free Delivery Across India**

- ✓ Perpetual Licence : 1 USB Dongle
- ✓ Files & Database Scanning
- ✓ Updates & Support: ₹4,999 / Year

Dongle Works On Any PC · One Licence, One Dongle

HOW IT WORKS

1 — Scan
Point it at folders, drives or a database. Nothing leaves your machine.

→

2 — Review
See every file & table ranked by risk, with values safely masked.

→

3 — Protect
Quarantine, encrypt, redact or delete — and keep audit-ready proof.

NEW · v1.3

Now scanning in 30 languages

Personal Data Protection

Now in 30 Languages — Across India & Europe.

The same 100% offline scanner now speaks **30 languages**, reads Aadhaar cards printed in **every Indian language**, and detects **German & EU** personal data to GDPR / DSGVO standards. Everything on this page is included — no extra module, still fully offline.

SPEAKS YOUR LANGUAGE — 30 LANGUAGES, CHOSEN AT INSTALL

🌐 **Interface & reports in 30 languages — including all 13 languages in which Aadhaar is printed.**

English · US · UK · India | **Deutsch** · German | **Français** · French | **Español** · Spanish | **Italiano** · Italian | **Português** · Portuguese | **Nederlands** · Dutch | **Polski** · Polish | **Čeština** · Czech | **Dansk** · Danish | **Svenska** · Swedish | **Română** · Romanian | **Magyar** · Hungarian | **Ελληνικά** · Greek | **Русский** · Russian | **العربية** · Arabic | **हिन्दी** · Hindi | **मराठी** · Marathi | **বাংলা** · Bengali | **অসমীয়া** · Assamese | **ગુજરાતી** · Gujarati | **ਪੰਜਾਬੀ** · Punjabi | **ଓଡ଼ିଆ** · Odia | **தமிழ்** · Tamil | **తెలుగు** · Telugu | **ಕನ್ನಡ** · Kannada | **മലയാളം** · Malayalam | **اردو** · Urdu

The language is picked during installation and becomes the default for everyone on that computer; any user can switch instantly from the globe menu in the app. Reports are produced in the chosen language too.

★ Aadhaar on scanned cards — detected in every Indian language

A photographed or scanned Aadhaar is read by OCR and recognised even when the 12-digit number is printed in a regional script. TSAFE folds every Indian numeral system to ordinary digits before validating the Verhoeff checksum — so Aadhaar copies in any language, in image or PDF, are caught.

All 13 Aadhaar languages detected:

English English | **हिन्दी** Hindi | **मराठी** Marathi | **বাংলা** Bengali | **অসমীয়া** Assamese | **ગુજરાતી** Gujarati | **ਪੰਜਾਬੀ** Punjabi | **ଓଡ଼ିଆ** Odia | **தமிழ்** Tamil | **తెలుగు** Telugu | **ಕನ್ನಡ** Kannada | **മലയാളം** Malayalam | **اردو** Urdu

१२३४ Devanagari | **১২৩৪ Bengali/Assamese** | **૧૨૩૪ Gujarati** | **੧੨੩੪ Gurmukhi** | **௧௨௩௪ Tamil** | **౧ ౨ ౩ ౪ Telugu** | **೧೨೩೪ Kannada** | **൧൨൩൪ Malayalam** | **۱۲۳٤ Urdu**

NOW COVERS EUROPE — GERMANY (GDPR / DSGVO · BDSG)
