GoSafe DRIVE File Protection

New GoSafe DRIVE File Protection uses very strong AES 256 encryption mechanism. The encryption keys are stored in the dongle which can be customized by the user.

Dongles are additionally password protected to eliminate misuse when lost.

You can use GoSafe DRIVE Key Customization Tool to customize encryption key.

When dongle is lost you can create identical working dongle using your own customized key.

GoSafe Drive dongle allows three keys per dongle and you can select appropriate key before encrypting files.

This allows you to create three user groups with one single dongle.

Steps to Use GoSafe DRIVE File Encryption

- First step is to Install the software and Encryption Driver.
- Second step is to set the dongle password. Use GoSafe DRIVE key Customiser to set the password.
- Customise your encryption key using GoSafe DRIVE key Customiser so that you have control over your files. You can use this key to create identical dongles for a group of people or when you your dongle is lost.
- Make sure you save these keys in a safe place. You can use GoSafe DRIVE free edition to keep keys file in a safe place.
- Now you can use New GoSafe DRIVE (AES 256).

Notes:

You can change keys any number of times (about 1000 times) but please note that once you change the keys, files encrypted with previous keys will not open. You can reload key in the dongle to view previously encrypted file and hence make sure that you keep backup of keys.

It is strictly recommended that you should not change keys because AES 256 encyted file can not be reversed and you will lose data/files.
