GoSafe Drive is designed for secure sharing of information considered to be known only to few people within the organization (close User Groups).

GoSafe Drive is also suitable for protecting personal data, financial data and other privacy related information.

GoSafe Drive works as a normal drive and you can even install your accounting software in it and keep all accounting data in a music or video file.

With Google drive desktop application uses can synchronize the file and at the same time mount it as a drive locally and use it like any other physical drive (flash drive / pen drive).

Here is a brief guide on how to use "GoSafe Drive" and "GoSafe Drive Key Customizer". GoSafe DRIVE File Protection uses very strong AES 256 encryption mechanism.

There are two steps in GoSafe Drive File Protection

1. GoSafe Drive Key Customizer.
2. GoSafe Drive.

Step 1: GoSafe Drive Key Customizer

- ➢ Insert your **GoSafe Drive** dongle.
- ➢ Open "GoSafe Drive key Customizer" tool/software.
- ➢ ==Enter the Dongle password, this is admin password, by default the password is 123456, so make sure that you change the password by clicking on "Change password". Enter the changed password and click on "GO".==
- ➢ You can reset your password if you have the encryption keys, click on **"Reset Password"** and load the encryption key, enter the new password and click "OK".
- ➢ Now click on key 1, key 2, key 3, or copy the required keys of existing groups, save the keys in a safe place and click on **"Update GoSafe Drive Key".**
- ➢ For each dongle you have three keys and hence you can create three encrypted groups.

To create user groups, first make encryption keys for the group and accordingly add the encryption keys in the dongle.

For example:

Group 1:
enqgsmdxqflbjnzffrqhlxmubdjsnjjxekpfwutoxlvxzldvukuhmjtggeccwxglsnofrvctqiqfvnoeiuncnybfjcpzbotsyrgb
Group 2:
hykllnviktutwxfbjibueizokeqkwkuvzhfgxawtzktqldvvqeyqdnkupvybaxzwaxnthdfcjstlivinabgosbgzxcnvcxjdoaum
Group 3:
okheopglfvkdfkzlzjwbzwqwkwllgxqdhcujbccefpeusvelrazgucawgfqiohnugzelgtsoltoxacfnciklkwpcqmkevofrdtvy

Enter the dongle password and click on "**GO**"

Click here to change password.

You can reset dongle password if you know the encryption keys of the dongle.

Click on "Update GoSafe Drive Key" after saving.

Generate keys or paste keys shared by the group members.
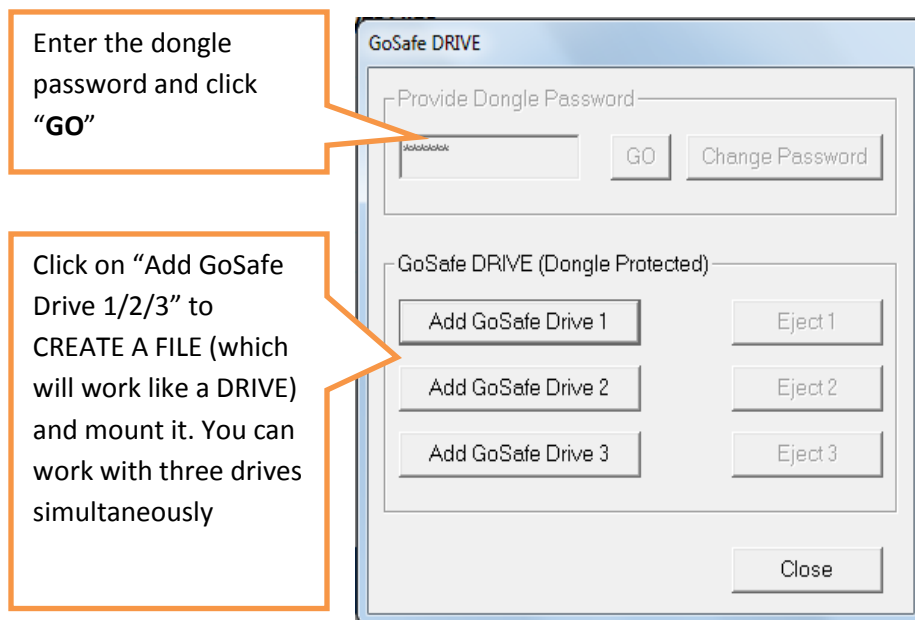

Save the keys in a safe place

➢ Share the key between your group members, Ask the remaining group users to copy the same key, while creating keys in **"GoSafe Key Customizer"** as key1 or key2 or key3, they can use remaining two keys for two other groups.

➢ Once you change the keys in dongle you cannot read/write the data encrypted with previous keys.

➢ You can generate a lost dongle by loading the same keys which were used to create the dongle into a new dongle.
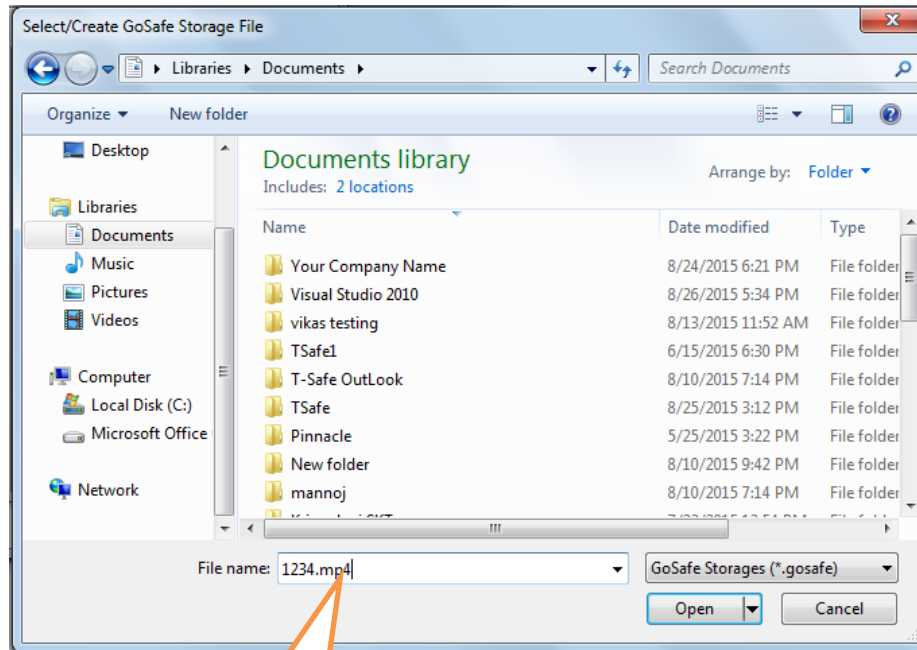

- ➢ You can change the dongle keys any number of times (about 1000) times.

Step 2: GoSafe Drive

- ➢ Connect GoSafe Drive dongle, Open GoSafe Drive, Enter password and click "OK".
- ➢ Click on **"Add GoSafe Drive 1".**

Enter the dongle password and click "**GO**"

Click on "Add GoSafe Drive 1/2/3" to CREATE A FILE (which will work like a DRIVE) and mount it. You can work with three drives simultaneously

Create a file of any format(this file will mount as a drive) click on "Open"

- ➢ Now select the group, if you select group 1, then your files are encrypted using key1, similarly for group 2, key 2 will be used and for group 3, key3 will be used. So file will be mountable as a drive using any dongle having the same key (any of three keys in the dongle can match).
- ➢ The **"Display Name"** will be your drive name and it will be displayed when drive is visible (or mounted) so give a name which is more appropriate to identify the data in the drive.
