TSafe DRM for Fonts

Digital Rights Management / Licensing / Protection of FONTS

Piracy of fonts is rampant and very easy. Font installation requires just copying the font files (TTF/OTF) in the specified font directory.

In absence of any reliable DRM for Fonts, fonts developer loose huge revenue in licensing as they tend to distribute fonts through online licensing mediums.

TSafe DRM for Fonts installs fonts from a secured read only location and ensures that font files cannot be copied or transferred.

TSafe DRM for Fonts uses secured USB Dongle and is available with and without limited period licensing (i.e with expiry date).

TSafe DRM for Fonts even prevents **Font embedding.** TSafe protected fonts cannot be embedded. Font embedding is the inclusion of font files inside an electronic document. Font embedding is controversial because it allows licensed fonts to be freely distributed.
